

Self-Modifying Logic

Allows model to generate and apply PyTorch layers dynamically during runtime.

Features

- AST-safe code generation
- Layer addition/removal
- Stability mechanisms

Example

```
class SafeSelfModifyingDML(nn.Module):  
    def generate_safe_code(self, x):  
    ...  
    def apply_code(self, code_str):  
    ...
```
